

VTEL MCU-8

The simple 8 site multipoint bridge

VTEL's All-In-One Multipoint Control Unit

The VTEL MCU-8 is the easiest to use MCU that combines **Multipoint Video-conferencing, Streaming, and Recording**

This single all-in-one platform provides all the video communication tools a small to medium size organization needs to expand the utility of interactive videoconferencing throughout their organization.

Multisite conference with H.239 Data-sharing

- Display is in two by two display. The speaker is highlighted by green box.
- The display can also be large box for the speaker and smaller boxes for the other participants.
- IPanel is in split screen mode with a PowerPoint presentation on the left and people on the right.
- Each participant calls the same IP address and they are added automatically to the conference.

Streaming view using ordinary Internet browser

- Remote viewers can observe a conference just by dialing the same IP address as the conference.
- The streaming viewer doesn't need any special software or hardware to see and hear the conference...anywhere in the world.

Playback of recorded view using MS Media Player

- One click and record a multipoint conference
- Post the recorded file (.wmv) on your corporate or educational LAN, or
- Email the recording (file) as an attachment
